Problem Statement

How might we help tourists visiting old and beautiful places in cities like Lucknow to easily learn about the history, stories, and cultural importance of these buildings in a fun and simple way, without depending on physical sign boards that are often missing, damaged, or outdated?

Pain Points Addressed:

- Lack of consistent, accurate, and engaging on-site information
- Language barriers for non-native visitors
- Physical signboards prone to weathering or vandalism
- Risk of physical damage from overcrowding or improper tourist behavior

The SafarSetu Solution:

Our most highly-rated solution involves creating a chatbot. A QR code for this chatbot will be prominently displayed on an information board near each tourist spot. Tourists and visitors can simply scan this QR code. After scanning the QR code, they will be able to interact with

QR Code Placement

QR codes are placed on information boards near tourist spots.

Scan and Redirect

Tourists scan the QR code, redirecting them to Telegram.

Haveli Selection

The chatbot prompts users to select the tourist spot’s name.

Rich Information

Information is provided via text, images, and audio.

Key Features of SafarSetu Bot

Interactive Chatbot

Engages tourists with a user-friendly interface.

Location-based Access

Provides relevant details based on the tourist spot's location.

Multi-format Content

Delivers information through text, images, and audio.

Multi-language Support

Auto-translates into other languages like "हिंदी", "اردو", "English"

Feedback System

Simple thumbs-up/down for tourists to express content quality

Smart Pagination & Navigation

Presents only 5 tourist spots per page for a cleaner view

Tools And Technology

Our SafarSetu is built on a robust technological foundation. We utilise modern tools for a seamless user experience.

Telegram Bot API

This powers interactive conversations and ensures wide accessibility for tourists, utilizing *python-telegram-bot v20.3*.

Python (Asyncio)

Used for backend logic and ensures high performance for a flexible and scalable development environment.

Edge TTS

Enables realistic voice synthesis for an immersive and accessible information delivery experience.

Deep Translator Integration

Leverages GoogleTranslator for real-time, accurate translation, making Haveli history accessible to a global audience.

Telegram Bot API

This powers interactive conversations and ensures wide accessibility for tourists, utilizing *python-telegram-bot v20.3*.

JSON Data Structure

Securely stores Haveli historical data and allows for modular expansion of rich content.

Replit Cloud Hosting

Hosts the HaveliGuideBot, ensuring reliable, scalable, and always-on availability for users.

Benefits for Tourists

Enhanced Learning

Gain deep insights into tourist spots history and culture.

Convenient Access

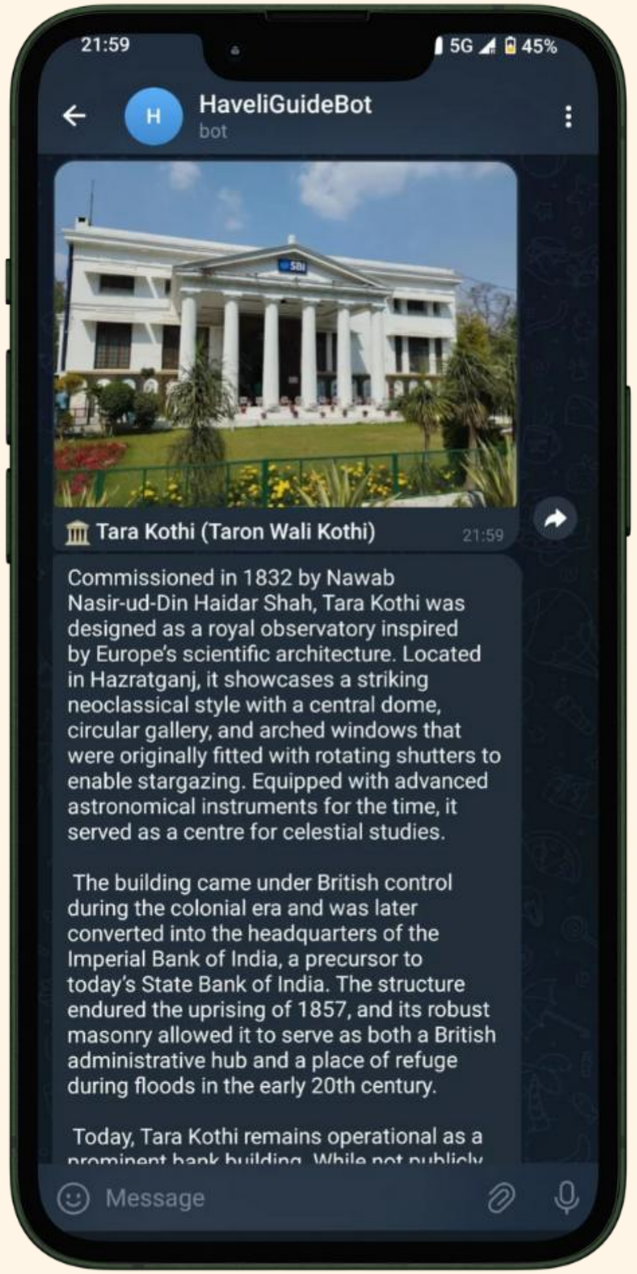
Information is readily available on their personal devices.

Heritage Preservation

Learn without causing any physical damage to structures.

Immersive Storytelling

Realistic AI voice narration adds emotional and cultural depth



Prototype of the solution

Our Telegram-based chatbot acts as a virtual heritage guide for tourists.

How it works:

- Upon starting the bot, users are prompted to select a language
- They can then browse a curated list of tourist spots with images
- Each selection provides a detailed history and cultural background
- The bot reads aloud the description using human-like voices
- Users can give feedback on content quality
